“The Empire State owes a lasting debt of gratitude to firefighters who have made the ultimate sacrifice while striving to protect the lives and property of others. Through their courageous actions and steadfast dedication, they have joined the ranks of America’s greatest heroes.

As the son of a volunteer firefighter who proudly served his community for 50 years, I know from personal experience the profound honor and sacrifice associated with the American firefighting tradition. It is truly gratifying to know that the honorable work performed by our firefighters, who are imbued with such a selfless dedication to protecting human life, will never be forgotten by our citizens.

Members of the fire service provide one of the most crucial services to the residents of communities throughout New York State. All New Yorkers join in the spirit of this salute our State’s fallen firefighters. May we always acknowledge, honor and revere the lives that have been spent in our defense. As citizens, we owe them and their families our deepest respect and eternal gratitude.”

Governor George E. Pataki

Dedication of New York State Fallen Firefighters Memorial

October, 1999

FIRE IN NEW YORK is dedicated to those who made the ultimate sacrifice in 1998 while striving to protect the lives and property of others.

Lieutenant James W. Blackmore

New York City
June 5, 1998

Firefighter James Bohan

New York City

New York State Fallen Firefighters Memorial

BEGINNING WITH *FIRE IN NEW YORK 1998*, fire and incident data will no longer be adjusted for non-reporting. Where comparisons are made with 1997, those numbers are also shown as actually reported, without adjustments.

Since the first publication of *Fire in New York* was issued in 1981, OFPC staff have employed various methods to estimate incidents in non or partially participating departments. The statewide totals without adjustment in this year's report should be roughly seven to eight percent lower than the previously adjusted totals.

New York City data no longer includes dollar loss or civilian injury estimates. New York City does not collect or report this information and in the past these numbers were based on computer extrapolation.

The 1998 deadline for submitting reports was March 1, 1999.

When the New York State Fire Reporting System began in 1977, 42 percent of the state's fire departments reported fire incident data. When the first *Fire in New York* report was released in 1981, fire reporting participation had increased to 69 percent. By 1997, nearly 86 percent of all fire departments reported their fire and emergency responses—an estimated 93 percent of all actual responses.

Arson

Incendiary/Suspicious Fires

Of 36,892 fires where causes were reported, 4,489 (12.2 percent) listed the cause of fire as either incendiary or suspicious—a slight decrease from 12.6 percent last year; 451 of these involved juveniles.

Juvenile-Related Fires

Juveniles were involved in 1,224 (3.3 percent) of all fires reported. In addition to the 451 intentionally set fires mentioned above, juveniles were involved in 773 other fires where the cause was something other than incendiary or suspicious.

New York City Arsons

Within the City of New York, 8,373 fires were reported to the Bureau of Fire Investigation. Of these, 2,574 or 30.7 percent were listed as incendiary in nature. The Bureau reported that 2,269 of these incendiary fires occurred in structures, 260 were vehicles and the balance of 45 fires were other property types. The FDNY responded to many other fires that were not turned over to the Bureau of Fire Investigation. No causal information is available for these fires.

Arson Dollar Loss

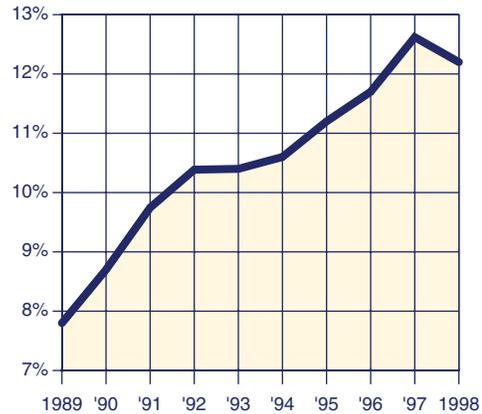

Arson fires were responsible for more building dollar loss than any other cause, accounting for 18 percent of all structural dollar loss reported. Arson is the leading dollar loss cause for all nonresidential structure fires and second only to heating for residential fires.

Structure and Vehicle Arson

As illustrated, incendiary and suspicious fires were responsible for 14.28 percent of all structure fires in 1998. This is up nearly a full percentage point from the 13.3 percent reported last year. When juvenile fires are added in, the total comes to 16.25 percent of all structure fires. Arson is the leading cause of fires occurring in educational and institutional properties and is the third leading cause, behind heating and cooking, for residential fires.

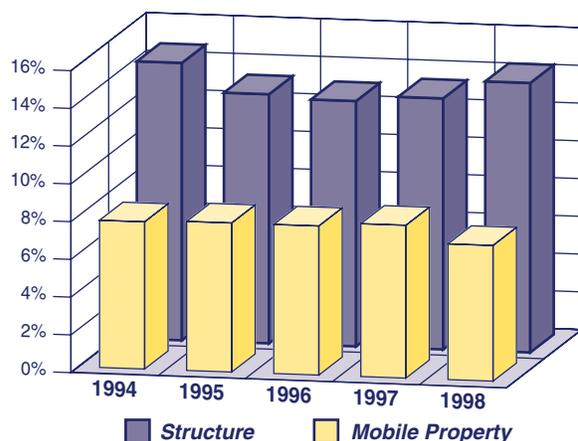

Only 7.19 percent of all vehicle fires reported were listed as either incendiary or suspicious. This is the lowest percentage of incendiary or suspicious vehicle fires reported in ten years and represents a drop of nearly one full percentage point after several consecutive years of incremental increases in vehicle arson percentage.

Arson as a Percent of All Fires

Arson

Arson by Region

New York City is home to 40.7 percent of the State's population. The 2,574 arsons reported by New York City's Bureau of Fire Investigation represent 32.8 percent of all arsons reported in New York State for the year. By contrast, for 1997, New York City reported 28.8 percent of all arsons.

The 11 Metro Counties (those with populations in excess of 250,000), contain 39.0 percent of the State's population. A total of 3,470, or 44.3 percent of all arsons were reported from Metro Counties in 1998. This is less than 1997 when Metro Counties accounted for 51.9 percent of all arsons in the State.

The remaining 46 suburban or rural counties combined contain just 20.3 percent of the State's population. For 1998, these counties reported 1,792, or 22.9 percent of all arsons. This percentage is up slightly from last year when these counties suffered 19.3 percent of all arsons.

Incendiary Fires by Region				
	Population		1997 Arsons	1998 Arsons
New York City	7,322,564	40.7%	28.8%	32.8%
Metro Counties	7,011,565	39.0%	51.9%	44.3%
Rural Counties	3,656,146	20.3%	19.3%	22.9%

Unknown Fire Causes

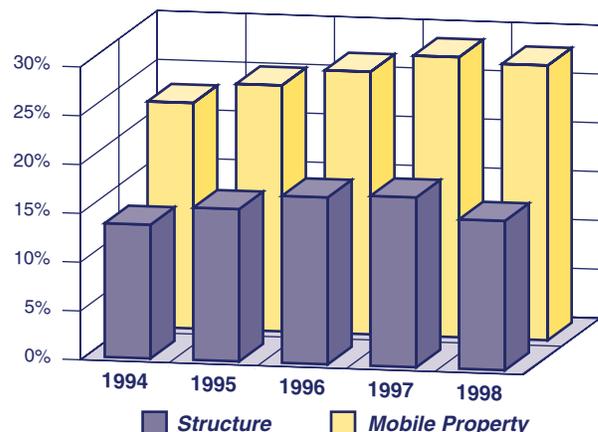

Fire in New York 1997 reported that the percentage of fires reported across the State from undetermined causes seemed to be increasing. As the accompanying chart illustrates, that trend may be changing.

Unknown structure fires were down statewide from 17.4 percent of all fires in 1997 to 15.3 percent in 1998. Unknown vehicle fires were also down slightly, from 28.7 to 28.15 percent.

Metro Counties had a lower percentage of unknown cause structure fires than Rural Counties—14.1 percent for Metro and 16.6 percent for Rural Counties. Rural Counties reported a lower percentage of unknown cause vehicle fires, but both are high—31.5 percent for Metro Counties and 23.5 percent for Rural Counties.

Casualties

Clowns, Clipboards

and 5 Bucks

FIRE IN NEW YORK 1981 reported 550 civilian fire deaths; by 1998 that total had dropped below 200. Why? Among numerous factors contributing to this reduction, three stand out from the rest: fire safety education, code enforcement and the availability of low-cost smoke alarms.

Fire and life safety educators have led us into a safer world. They have used whatever means, conventional or not, to spread their message. Some go to clown school or learn puppetry to help get their message to younger children. Some conduct in-service training for hospital or nursing home staff. A local TV news reporter does her part when she mentions a child who was saved by remembering to “stop, drop and roll.” A popular weekly network series shows a family choosing a meeting place for their home escape plan. Education comes in many forms.

The Uniform Fire Prevention and Building Code took effect in 1984 and enforcement of the Code was made mandatory, unlike with several previous codes. Not only did building construction improve, but the materials, products and systems themselves met higher standards. Fire chiefs became responsible for alerting code enforcement officials after certain types of fires. Local code officials in turn made sure that proper repairs were made and unsafe conditions corrected.

The “five dollar smoke alarm” is a life saver at less than half the price of a replacement battery for the earliest models. Combination units powered by 110 volt AC current with a battery backup feature can be purchased for around \$30. Education and better code enforcement contribute to the increased use of smoke alarms. Smoke alarms are now mandatory in new construction and in all existing dwellings. Surely, improved smoke alarm technology—resulting in better products at much lower prices—has had a major effect by making this technology much more affordable.

In many cases, minor fires are handled without the fire department ever being called. Smoke alarms give early warning of a fire while it is still small and it is extinguished by the occupant. This “side-effect” of smoke detectors may be partly responsible for the number of civilians injured while attempting to extinguish a fire. Individuals in the 20-49 year age group are thought to be most likely to attempt fire control. Up from 38 percent in 1990, this age group now accounts for over 65 percent of all civilian injuries. While the standard advice when a smoke alarm sounds has always been to leave the building and call the fire department, it is human nature to attempt to control a small fire. Educators must continue to help the public understand how quickly a fire can

grow, but at the same time provide information—such as the “put a lid on grease fires” campaign—to help the public decide when and how to attempt to extinguish a fire.

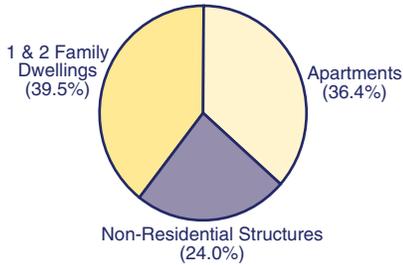

Nevertheless, those dedicated to fire and life safety remain committed to do all within their power, by whatever means, to continue to reduce the number of annual fire deaths and injuries.

THE FIRE AND LIFE SAFETY EDUCATOR TASK FORCE

IN FALL 1998 Governor George E. Pataki signed into law an important legislative initiative. Originally introduced by Oneida County representatives of the Firemen's Association of the State of New York and strongly supported by the Legislature, an amendment to Executive Law Article 6-c, §156, 1a, directed the Office of Fire Prevention and Control to "advise and assist the State Education Department in the development of a specialized course of study for teachers of fire and arson prevention." In January 1999 Secretary of State Alexander F. Treadwell convened a 16-member Fire and Life Safety Educator Task Force to initiate the needed curriculum development activities. Members of the Task Force have diverse teaching backgrounds, from pre-K through college, and represent State agencies, fire organizations and life safety educators.

After extensive research into New York's life safety education requirements, the State Education Department assisted the Task Force with a fact-finding safety education inquiry mailed to 7,200 school officials. Based on 1,350 responses and other research, a 15-unit curriculum outline was established and college level instructional guides will be drafted. "These are truly exciting days in term of fire and life safety education," commented State Fire Administrator James Burns. "We're the first state in the nation to take this approach to teacher training and we thank our state's teachers, Education Commissioner Richard Mills and the dedicated members of the Secretary's Task Force for their efforts on this important project." The Task Force project is slated for pilot testing in Fall 2000 with projected delivery to New York's 101 teacher-training colleges by Fall 2001.

Hazardous Materials...

Alternative Fueled Vehicles

IN 1998, NATIONAL FOCUS TO reduce toxic gases and emissions released into the atmosphere started to have an impact on emergency responders. While factories and power generation stations were forced to reduce stack emissions the automobile industry was also coming under new pressure to develop vehicles that produced less pollutants and ultimately improve air quality. This challenge would lead to new fuel systems and power systems.

The term "Alternative Fueled Vehicle" and "Flexible Fuel Vehicle" started to become familiar terms. As the automobile industry geared up to meet this new challenge a wide variety of options were being explored. The electric vehicle was certainly not a new idea as this technology was used nearly 100 years ago. Propane powered vehicles had been in use for decades and natural gas powered vehicles was being experimented with in fleet vehicles.

In 1998 as the provisions of the Clear Air Act got closer to implementation, the auto industry started to develop alternative fuels and power plants. Liquefied Natural Gas (LNG) railroad locomotives were manufactured for use in California, Compressed Natural Gas (CNG) filling stations started to appear at many locations across the state, and the Hybrid vehicle using two different power systems started to be seen on the highways.

One unique vehicle being produced was called the *Flexible Fuel Vehicle* which could operate on gasoline, methanol, or a combination of the two. A computer built into the engine analyzes the fuel and adjusts the engine for optimum fuel consumption and operating performance. A new Hybrid vehicle was designed to use an energy-efficient diesel motor to power an electrical generator operating on as much as 480 volts. The electrical power would charge a bank of batteries on the vehicle which operated electric motors on the rear wheels.

When the vehicle needed additional power, such as when accelerating, the electrical power from both the batteries and the generator would go to the motors at the wheels for a smooth acceleration. The "Star Wars" concept on the drawing board was the Hydrogen Fuel Cell concept being developed by two leading manufacturers. This concept burned a fuel such as gasoline or methanol and produced hydrogen which was converted into electricity which recharged the bank of batteries that powered the vehicle. Emissions, such as carbon monoxide, were recycled into the combustion chamber and ultimately the only tail pipe emission is water vapor.

Today all of the options being researched or developed in 1998 are in production or are being field tested. The vehicle of the future is here. The alternative fueled vehicle will have an impact on emergency responders and the procedures they utilize to safely handle emergencies.

* Does not include New York City

Fire Reporting System – Version 5.0

THE UNITED STATES FIRE Administration (USFA) has provided the leadership for fire reporting nationwide for many years. As such, we have witnessed several changes. The ultimate result of change is to obtain better information. This information is used in a variety of ways to define exactly what the fire problem is and what can be done to further reduce loss of life and damage.

New York State General Municipal Law (GML 204-d) requires that the fire chief of any fire department or company shall, to the extent reasonably possible, determine or cause to be determined, the cause of each fire or explosion which the fire department or company has been called to suppress. He shall file with the Office of Fire Prevention and Control of the Department of State a report containing such determination and any additional information required by such office regarding the fire or explosion. The report shall be in the form designated by such office. He shall contact or cause to be contacted the appropriate investigatory authority if he has reason to believe the fire or explosion is of incendiary or suspicious origin.

OFPC currently receives these reports in one of two methods, paper or electronic format. They are currently entered into the data base that resides on a main frame computer at the NYS Department of Motor Vehicles.

OFPC now uses a modified Version 4.1. When implemented, it was modified to shorten the reporting codes from three digits to two. The shortfall of this digit reduction is best explained as: a fire started with a hot water heater (coded Equipment Involved #12) but it is unknown whether the heating source was gas, oil, electric, or solar. The unknown element would have been identified by the third digit which was deleted to make the program's coding choices easier and less cumbersome to use in the field.

Version 5.0 is the newest system being endorsed by the USFA and supported by the National Fire Information Council (NFIC). Version 5.0 is intended to be a computer driven system with drop down option lists to expedite the completion of the form. We are aware that many departments do not have computer capability. Therefore, OFPC will continue to have a one page paper Version 5.0 available that will capture the most important information.

In the past OFPC approved software as NYS-compatible which allowed vendors to sell it. Now only the USFA can certify software. As of January 4, 2000, there were 96 vendors who submitted their software for evaluation with 12 being certified and 84 awaiting certification. It is important that any fire department contemplating the purchase of new Version 5.0 software verifies that it is certified. Electronic reports can only be accepted on certified software. A current listing of certified software vendors is available at the website of the Federal Emergency Management Agency (FEMA) at <http://www.nfirs.fema.gov/VendorCert.htm> or phone FEMA at (301) 447-1000. Fire departments should ask potential vendors for a copy of their certification letter.

OFPC's Implementation of Version 5.0

The Office of Fire Prevention and Control will operate two distinct fire reporting systems for at least two years. This will include the current system on the main frame computer and a PC based system.

1. The Office is in the process of ordering a computer with the capability of holding 5,000,000 incidents. We will be using a USFA approved statewide system by SUNPRO to collect Version 5.0 data. It can be submitted to OFPC via floppy disk or CD. This system is planned to be operational by March 31, 2000.

2. There is a request to develop a new data base system for the NYS Fiscal Year 2000-2001. If approved we will hire a contractor to write a USFA approved Version 5.0 program for NYS that will be operated on a new computer system. We will also incorporate a fire department Version 5.0 program that will be available for NYS fire departments. It is anticipated that the new system will incorporate some or all of the following features:

- a. Electronic transfer from fire departments to OFPC by Internet, dial-up modem, floppy disk, or CD.
- b. Public access to selected portions of the data base.
- c. Fire department access to their data.
- d. Easy utilization of data (user friendly).
- e. Easy access for OFPC staff (i.e., fire investigation research).

3. Once the Version 5.0 software is in use, the paper form will be revised. This form will record the most vital information that can be captured on a single page. Forms will be scanned into the data base rather than keypunched.

4. By 2003 only one fire reporting data base will be utilized. It is our goal to have the years 1999, 2000, 2001 and 2002 converted from Version 4.1 and be on-line with the current year. Each year the oldest year on file will be archived to make room for the new year. The archived data will be stored on CD for easy research of the archives.

5. The USFA has offered the use of the federal computer to accept and store fire data directly from the fire departments rather than going through the State's representative. For a variety of reasons most states, including New York, have decided not to go this route and will develop their own system. Once OFPC is on-line, we will share our data with the USFA on a daily basis. Note: a fire department cannot utilize the USFA offer without the state's permission. We have received several requests asking permission to forward reports to USFA. The State Fire Administrator does not have the authority to grant a fire department permission to utilize the USFA offer and as identified under GML 204-d, incidents are to be reported to the New York State Office of Fire Prevention and Control.

GENERAL MUNICIPAL LAW SECTION 204-d requires all fire chiefs in the State to submit fire reports to the Office of Fire Prevention and Control. Of the 1,786 municipal fire departments in the state, 85.8 percent submitted 1998 data. The deadline for submitting data was March 1, 1999.
