

NASA'S FIRE AND SMOKE

http://www.nasa.gov/mission_pages/fires/main/

National Aeronautics and Space Administration satellites, aircraft, and research are giving firefighters help battling wildfire and scientists a better understanding of the impact fire and smoke have on climate and ecosystems. Now information such as fire and smoke plume images, articles on the latest research, and multimedia resources will be available on NASA's just-launched fire and smoke site. Carbon monoxide animations of current fires, video from unmanned Ikhana aircraft, and a gallery of fires around the world are just a few of the not-to-be-missed offerings.
