

RECALL ALERT: 39,600 MAZDA B SERIES TRUCKS.

Mazda has issued a recall for 39,600 Mazda B Series pickup trucks from the 1995-1997 and 2001-2003 model years, according to the National Highway Traffic Safety Administration. The only pickups being recalled are those equipped with the Texas Instruments speed-control deactivation switch and/or antilock brake system manufactured before December 5, 2002. Part of the cruise control deactivation switch may corrode over time, possibly leaking. This could lead the switch to overheat, which may start a fire under the hood. This could happen even if the engine is not running. Mazda dealers will install a universal fused jumper harness on the deactivation switch for free.
